INFSCI 1017 Implementation of Information Systems Spring 2017

Time: Thursdays 6:00 - 8:30

Location: Information Science Building, Room 406

Instructor: Alexander Nolte

Office Hours:

- Monday, 1-2PM
- Thursdays, 4-5PM
- By appointment

Contact Information: anolte@pitt.edu

Overview:

This is a second JAVA programming course that develops professional software development skills. This is an active learning course where students complete a series of projects that will include a robust, three-layer desktop and web application (Model-View-Controller architecture). Key topics include GUI classes, event handling, exception handling, common algorithms, file I/O, JAVA database programming (JDBC), and web application development using HTML, CSS, Javascript and JavaEE.

Prerequisite: C or better in INFSCI 0017 or CS 0401 or INFSCI 0015 (at Pitt Greensburg).

Co-requisite: INFSCI 1022

Objectives:

Upon successful completion of this course, the student will be able to:

- 1. Develop solid understanding of 3-layer (Model-View-Controller) software architecture
- 2. Design and implement database-driven desktop applications using Java
- 3. Design and implement web applications using HTML, CSS, Javascript and JavaEE

Course Schedule (tentative, subject to change):

Week	Date	Topic(s)
1	1/5	Introduction
		Course overview
		 Setting up Java, Eclipse and GIT
		 Implementing your first Java example
2	1/12	Introduction
		MySQL Workbench overview
		Working with GIT
		OOP concepts review
		 MVC (Model-View-Controller) architecture
3	1/19	Introduction to MySQL
		Entity relationships
		Introduction to JDBC
		 Using Java to interact with MySQL
4	1/26	WindowBuilder overview
		 GUI design for desktop applications
		Java Canvas
		Event handling in Java
5	2/2	Error handling in Java
		o Try/catch
		o Exceptions
		o Error handling
		o Error logging
		Debugging
		Interfaces
		Recursion
6	2/9	Data structures
		o Hashtable
		o Map interface
		o Vector
		o Stack
7	2/16	Data structures
		o Graphs
		o Trees
8	2/23	Common algorithms
		o Sorting
		 Bubble sort
		 Bucket sort
		Insertion sort
		 Selection sort
		 Merge sort

		o Eight queens
		o Tower of Hanoi
9	3/2	Introduction to web application development with Java
		 Configuring Eclipse for web development
		 Java Server Pages vs. Java Servlets
		Request / response
10	3/9	Spring break
11	3/16	 Introduction to HTML 5
		Introduction to DOM
		JavaScript crash course
		 Manipulating DOM elements
		 Introduction to JSON
12	3/23	 Introduction to web services
		RESTful web services
		Working with external data
		o XML
		o JSON
		o RSS feeds
13	3/30	Introduction to AJAX
		 Introduction to jQuery
		Consuming Restful Web Services
		 Using server-side JSON parsing
		Using jQuery AJAX
14	4/6	Menus
		Action bars
		Navigation
		Multiple Screens
15	4/13	Data binding
		 Working with raw JSON vs. using frameworks
		 Introduction to Backbone.js or Angular.js
16	4/20	Final project due
		Final team presentation

Assignments:

- All assignments will be individual. However, you are allowed to collaborate with other students (see **Collaboration vs. Cheating** below).
- The final project will be done in a group of three. Grades are individual.
- All assignments must be submitted via CourseWeb.
- All projects must be submitted via GitHub (<u>https://github.com/</u>). You will have to create a GitHub account, create a Git repository and submit a link to your repository via CourseWeb.
- The due date for all assignments and projects is the end of the day (11:59pm) BEFORE the lecture.

Late Submissions:

Projects/assignments submitted after due date will be accepted, but your overall grade for that project/assignment will be reduced by 10% of the grade for every business day after the submission deadline. For example, if you will submit your work one week late, you will lose 50% of the grade.

Collaboration vs. Cheating

Collaboration on homework is permitted to an extent. Specifically, students are allowed to discuss the possible solutions to a problem and help each other with logic errors. However, handing your work to someone so that they may see a copy of your solution, or dictating code to a person on line-by-line basis is not within the spirit of the collaboration policy or the honor code of the university.

Laptop Policy

In order to succeed in this course, you must bring a laptop with you to every class. Most lectures will contain a lab component where you will have to complete (or at least begin) a programming assignment while in class. Furthermore, having a laptop will enable you to better follow code examples and assignments instructions.

Grading Policy:

- Assignments (Mini-projects): 25%
- Projects: 45%
- Final project (including presentation): 30%

Project Grading:

Your projects/assignments will be graded on the following criteria:

- 1. The project compiles and executes without errors
- 2. The project complies with provided requirements
- 3. The code follows provided coding standards, formatting, and naming conventions
- 4. The code is well-documented using JavaDoc-style comments
- 5. The program has proper error handling and error logging.

If your submitted project does not compile and run, I will not grade it. You will have to fix all issues and resubmit your program. I will only check the latest version in GITHub.

Grading Scale:

- 93 <= A < 100
- 90 <= A- < 93
- 88 <= B+ < 90
- 82 <= B < 88
- 80 <= B- < 82
- 78 <= C+ < 80
- 72 <= C < 78
- 70 <= C- < 72
 60 <= D < 70
- 00 <= D <
 F < 60

Academic Integrity:

Cheating/plagiarism will not be tolerated. All work must be your own, unless collaboration is specifically and explicitly permitted as in the course group project. Any unauthorized collaboration or copying will at minimum result in no credit for the affected assignment and may be subject to further action under the University Guidelines for Academic Integrity (<u>http://www.provost.pitt.edu/info/ai1.html</u>). You may incorporate excerpts from publications by other authors, but they must be clearly marked as quotations and properly attributed. You may discuss your ideas with others, but all substantive writing and ideas must be your own, or else be explicitly attributed to another, using a citation sufficiently detailed for someone else to easily locate your source.

Disability:

If you have a disability for which you are or may be requesting an accommodation, you are encouraged to contact the Instructor and Disability Resources and Services, 216 William Pitt Union, (412) 648-7890 / (412) 383-7355 (TTY), as early as possible in the term. Disability Resources and Services reviews documentation related to a student's disability, provides verification of the disability, and recommends reasonable accommodations for specific courses.
